TRAIN ROSS

THE COMPACT MOBILE FILING SYSTEM

THE NEW CONCEPTION OF COMPACT MOBILE FILING SYSTEM

READY TO BUY, READY TO DEVELOP IN TIME, READY TO SURPRISE YOU WITH NEW PERFORMANCES

It's no more time of compact mobile filing system: planned, prepared, assembled every time in different ways. It's no more time of long wait, long deliveries or missing pieces during the assembling. A new phase has begun: TRAIN ROSS, THE COMPACT MOBILE AND MODULAR FILING SYSTEM IN KIT BOXES. Model selection, purchase of packaging and assembly: the acquisition time of product is so drastically cut down. And that's not all: everything is ready in the box, no component parts are missing, just assemble it. Benefits continue during the assembly phase: quicker, easier, simpler. Finally assembled, TRAIN ROSS will surprise you with its performances: new precision, soft movement, new security, new maintenance absence, new solidity, new long lasting in time. It's no more time of unchangeable compact mobile filing systems, unable to assume new configurations to supply your needs because different from each other. From today, with TRAIN ROSS, thanks to its modular conception, in every moment you can decide to add, to your first configuration, new additional units, according to your specific needs: like a train to which you add or remove wagons, TRAIN ROSS is ready to grow with the quick and cheaper addition of new modules. Ready to buy, to develop in time, to surprise you with new performances: the Compact Mobile Filing System enter in a new phase, the phase of TRAIN ROSS.

READY TO BUY: MANY VERSIONS READY TO ASSEMBLE

READY IN A BOX, USEFUL TO TRANSPORT, EASY TO ASSEMBLE: A NEW COMPACT MOBILE FILING SYSTEM IS BORN

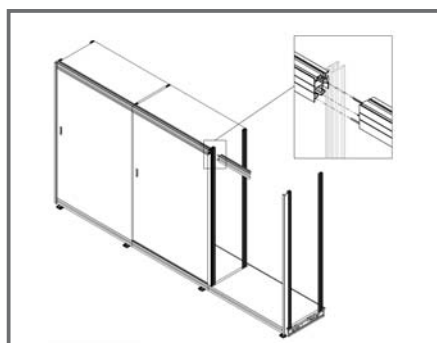

1 + COMFORT: ALL ASSEMBLY ELEMENTS READY IN THE PACKAGING

How many times an assembling has been interrupted due to a missing component part? Now this will not happen again: TRAIN ROSSS is delivered in assembly kit boxes, complete with all necessary component parts for structure realization. A new convenience, without surprises.

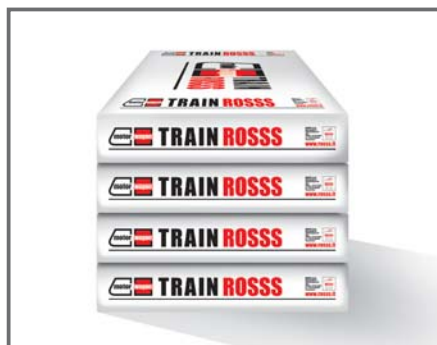

2 + ASSEMBLING FACILITY: NO BRACING SET AND ANCHORAGE ON SHELVING SYSTEM

The assembly of bracing sets and anchorages: this is an operation that always requires some time and a special attention. In brief: one more complication. TRAIN ROSSS removes even this critical situation right from the beginning: thanks to its new conception, bracing sets and anchorages will not exist any more.

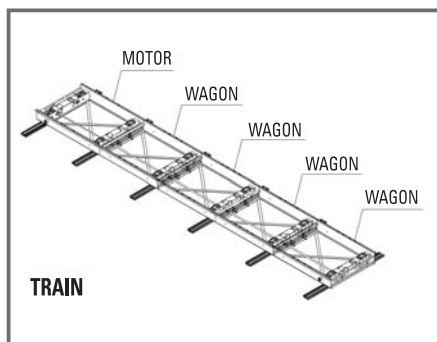

3 MODULAR ALUMINIUM RAILS FOR ASSEMBLY DOORS: THE NEW ASSEMBLY QUICKNESS

An innovative system, useful and effective: the modular aluminium rail allows to assemble doors quicker and easier. Time saved so money saved.

4 + TRANSPORT FACILITY: SMALL ASSEMBLY ITEMS

This is one of the great benefits of TRAIN ROSSS modularity: instead of big and bulky component parts, you will have modular elements, easy to handle and transport. An important saving for a more intelligent and efficient system.

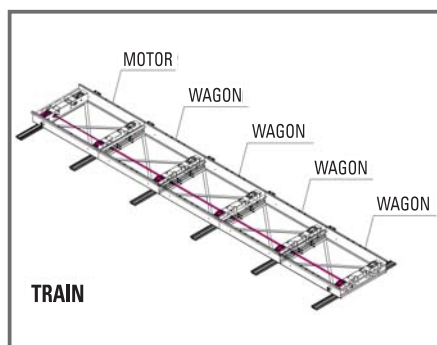

5 + FLEXIBILITY

The new modular system ready to follow your needs.

Remaining faithful to its name, ROSSS takes inspiration from the train modularity concept: one element of principal traction, MOTOR ROSSS, to which to add WAGON ROSSS upon needs, and realize a train with the desired length. An important feature, that will allow you to adapt the whole system in a new possible position without waste of space and without difficulty.

READY TO SURPRISE YOU WITH NEW PERFORMANCES:

NEW MATERIALS AND NEW SOLUTIONS FOR THE NEW CONCEPTION OF COMPACT MOBILE FILING SYSTEM

6 + TRACTION UNIFORMITY: TRACTION IS APPLIED ON EACH WAGON

Integral traction: the new precision of movement

Instead of a single wagon, where the handwheel is located, which drags all the others, TRAIN ROSSS offers an exclusive system of integral traction: traction is applied on each wagon ensuring an uniform and immediate movement and removing the unpleasant accordion-effect which is present when the movement of traditional traction systems starts. An effect, that in addition to being unpleasant, is also harmful in the long term for the system due to inertia and misalignments which effects on time to the structural elements. With TRAIN ROSSS instead, thanks to the transmission shaft that connects each wagon, the movement is more homogeneous and precise but above all, more correct and safe for the whole system.

7 + SOFTNESS AND PRECISION MOVEMENT: WHEELS ASSEMBLED ON SEALED BALL BEARINGS

For a most pleasant and accurate use of TRAIN ROSSS integral traction system, is the employ of sealed ball bearings to support wheels: maximum fluency and absence of friction, but also long-life and protection from dust.

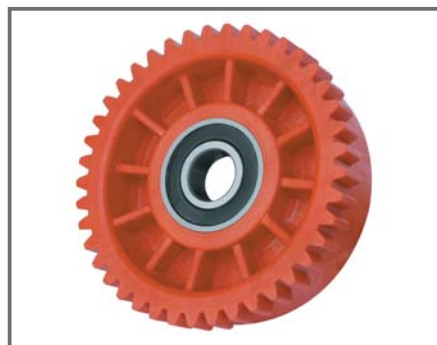

8 + NOISELESSNESS AND SECURITY: INTEGRAL TRACTION WITH A SHAPED-BELT INSTEAD OF CHAIN

Advantages: a mayor noiselessness, but most important minor inertia of movement and therefore greater safety, all thanks to the new shaped-belt, which replaces the traditional transmission chain. A new configuration, but also a new material, rubber instead of metal, for one of the main transmission devices to establish a new benchmark in the field of compact mobile filing system.

9 + NOISELESSNESS AND FLUENCY: WHEELS IN COMPOSITE MATERIAL INSTEAD OF IRON WHEELS

Iron wheels are an unbeatable solution in terms of big capacities: indeed we have kept them for those versions conceived for big loads movements. But for all other versions TRAIN ROSSS offers a great innovation: wheels in composite material, ideal to reach new standard as regards noiselessness, reliability and fluency.

10 + LIFE: SOLID STEEL SHAFT

New high-tech materials: the new duration in time.

The most traditional solution for a transmission shaft is a tube, often equipped by a very rudimentary fixing system, such as a simple pin placed crosswise to the same tube. Extremely poor solutions, designed to save row materials but very expensive over time, due to the enlargement of the hole, caused by the failure of row materials, a thin metal tube, with consequent backlashes that become worser every day in the transmission shaft. TRAIN ROSSS changes it: a solid steel shaft corrected with a pin slit, for a perfect traction, without damages or failures over time.

READY TO SURPRISE YOU WITH NEW PERFORMANCES:

NEW MATERIALS AND NEW SOLUTIONS FOR THE NEW CONCEPTION OF COMPACT MOBILE FILING SYSTEM

11

+ LIFE, NO RUST: DURALUMINIUM RAILS

The new TRAIN ROSSS duraluminium rails guarantee the performance of steel with one difference: they don't rust, they keep their original appearance and their brightness over time. Important elements for constant performances over time.

12

+ LIFE, NO MAINTENANCE, NO RUST: ALL TRACTION DEVICES REINFORCEMENTS IN PLASTIC SELF-LUBRICATING MATERIAL

Stop to the periodic maintenance: the exclusive plastic material of TRAIN ROSSS reinforcements is self-lubricated. Saved time and avoided problems at the origin, forever.

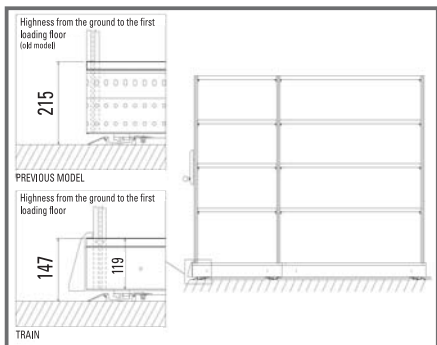

13

+ USEFUL SPACE: ALL MOVEMENT DEVICES ARE CONTAINED IN THE FRAME THICKNESS

New compact design: the new space and the new ergonomics.

Thanks to its new compact design, TRAIN ROSSS uses every centimeter of space: starting with the new arrangement of movement devices, contained in the thickness of the space-limited special frame.

14

+ USEFUL SPACE: CHASSIS MORE COMPACT

A new conception of chassis, thinner and less height: a precious expedient that retrieves useful space for storage. A further element of success for Train Ross.

15

+ ERGONOMICS: SIDE-SLIDING

To protect users from possible stumbles and shocks: but also the possibility to create an elegant design together with the wooden floor if requested. These are the functions of the exclusive side-sliding TRAIN ROSSS: useful, when floor can not be made on location, useful and beautiful with the assembled floor.
